

ANANDHU ANIYAN

SYSTEMS / APPLICATION SUPPORT ANALYST | OPERATIONS ENGINEER | AUTOMATION

Singapore | Singapore Permanent Resident | +65 9247 7871 | anadhu369@gmail.com | [LinkedIn](#) | anandhuaniyan.github.io

PROFESSIONAL SUMMARY

Systems/Application Support Analyst and Operations Engineer with 5+ years of experience across mission-critical payment processing, banking production support, semiconductor operations, and automation. Current Visa support professional experienced in incident investigation, operational monitoring, change/transition activities, log analysis, stakeholder communication, and HP NonStop (Tandem) automation. Proven ability to convert repetitive manual checks into secure, scalable workflows that improve speed, consistency, and operational reliability.

CAREER HIGHLIGHTS

- Developed and implemented automation solutions using HP NonStop (Tandem), TACL, and Outlook integrations, improving operational efficiency and reducing manual effort.
- Designed and deployed ATM Status Check Automation across 16 client environments, reducing 10-15 minute manual validation cycles to near real-time email reporting and recovering approximately 30-45 minutes during critical SW2V maintenance and transition activities.
- Supported mission-critical payment processing systems through monitoring, incident management, troubleshooting, system validation, transition support, and continuous process improvement.

CORE COMPETENCIES & TECHNOLOGY

Production & Operations	Application/Production Support (L1/L2), Incident & Problem Management, System Health Monitoring, Change & Transition Support, Batch/Job Monitoring, Root Cause & Log Analysis
Automation & Platforms	HP NonStop (Tandem), TACL, XYGATE-controlled environments, Python, Shell Scripting, Outlook-based reporting automation
Systems & Data	Linux, Windows, Oracle SQL, HeidiSQL, JBoss, server housekeeping, DR/vMotion coordination
Monitoring & ITSM	Netcool, Prognosis, Vital Signs, OIP Dashboard, ServiceNow, Jira, IBM monitoring tools, CARA deployment tool
Collaboration	Stakeholder communications, incident bridges, client/vendor support, SIT/UAT support, Confluence, SharePoint, Microsoft Office

PROFESSIONAL EXPERIENCE

Associate Systems Application Support Analyst

Visa Inc. 2024 - Present

- Developed a Tandem macro-based ATM Status Check Automation using HP NonStop (Tandem), TACL, and Outlook integration, automating collection, formatting, and email distribution of ATM status reports across 16 client environments.
- Reduced client-by-client ATM status validation from approximately 10-15 minutes per run to near real-time reporting and recovered about 30-45 minutes of critical operational time per SW2V MR/transition activity.
- Designed secure automation workflows within XYGATE-controlled Tandem environments, improving execution consistency while meeting operational and security requirements.
- Supported mission-critical payment processing platforms through operational monitoring, incident investigation, system validation, scheduled changes, and transition activities across DPS environments.
- Monitored system health and outages using Netcool, Prognosis, Vital Signs, OIP dashboards, and log analysis; escalated and managed incidents in line with ITIL/ServiceNow processes.
- Coordinated internal and external incident bridges, communicated business/client impact, and owned L1/L2 triage and resolution activities within strict operational timelines.
- Identified repetitive operational pain points and delivered daily-audit and monitoring automations that reduced manual effort, minimized human error, and improved reporting reliability.

Application Production Support (L2)

DBS Asia Hub Jun 2023 - Jan 2024

- Provided 24x7 rotational L2 production support, including server health checks, incident handling, business/user support, and daily/monthly/yearly batch and job monitoring.
- Performed Linux operations, production troubleshooting, storage housekeeping, and JBoss monitoring/restarts to maintain application availability and stable operations.
- Developed shell scripts and automated manual operational tasks to reduce repetitive workload and avoid human error.
- Supported Change Requests through the CARA deployment tool and coordinated blackout, DR flip, and vMotion requests for production servers.
- Supported SIT/UAT activities and used Jira for work tracking; performed database queries and operational checks using Oracle SQL and HeidiSQL.
- Worked with monitoring and support tooling to identify issues early, escalate appropriately, and drive timely resolution.

Failure Analyst

Micron Semiconductor Asia Pte. Ltd. Feb 2021 - 2023

- Executed a product testing project using Python, applying analytical troubleshooting and structured problem-solving to evaluate complex failures and potential solutions.
- Managed deviation reports in Jira and monitored Statistical Process Control (SPC) activities to support quality and process compliance.
- Maintained team knowledge-transfer content using Confluence and SharePoint and supported basic Linux operational tasks.
- Collaborated across teams with a proactive, quality-focused approach while maintaining accurate issue tracking and documentation.

Student Intern - Robotic & Automation Centre

Temasek Polytechnic Oct 2019 - Mar 2020

- Supported in-house robotics and automation projects, troubleshooting activities, software installation, and maintenance work.
- Built practical exposure to Workplace Health & Safety, 6S, Behavioral Based Safety, SolidWorks, Arduino programming, and Visual Studio.

EDUCATION

Bachelor of Science in Cybersecurity and Networks

Teesside University, UK | 2024

Diploma in Mechatronics

Temasek Polytechnic, Singapore | Apr 2017 - Apr 2020

ADDITIONAL EXPERIENCE & ACTIVITIES

- Part-time Staff, Grand Hyatt Singapore (May 2017 - Mar 2020) - developed strong customer-service, teamwork, and resilience in long-shift environments.
- Committee Member, Temasek Polytechnic International Students - supported student engagement and collaborative activities.
